TECHNOLOGIES

Increase your power.

The EXOSKELETON technology with dual 100% carbon ribs inserted in the structure of the frame and heart increase power and structural rigidity if the racket.

Increase your power.

The EXOSKELETON technology with 100% carbon ribs inserted in the structure of the frame and heart increase power and structural rigidity if the racket.

More power for your attack.

Exclusive design for the more aggressive players who allows to achieve more power in your shots. the frame's outer ribs provide the structure with rigidity and strength.

Increased rigidity and power.

A plate at the centre of the racket provides greater rigidity, giving your game more power. It also achieves better stability for most of your hits.

A stronger structure

The fibre inserts at the centre of the racket form part of its structure and create a connection point between the racket frame and face.

A more resistance racket structure

It has reinforced perimeter all around the racket to help generate more torsional resistance

Increase your power.

The Power Groove technology, with a rail inserted in the top of the racket will upgrade the structural rigidity and improve your power in the attack shots.

More effective strikes

The hole pattern is specially designed to make racket handling easier, for greater playing comfort.

Increased racket durability

The holes are arranged equidistantly in groups of 3, which strengthens the racket surface and improves durability.

Enhanced hitting efficiency

The 3D relief increases hitting effectiveness. The pattern is etched on the mould to provide greater density and to increase efficiency.
